

Balkan Boys

Technical rider

To do the best show possible we require the following:

Microphones with stands (see input list), power and other gear, as drafted on stage plan.

Position for **Mixing Desk** must be in the middle of the audience, as much as possible.

We require one of the following mixing desks:

- Midas M32
- Behringer X32 (fullsize or compact)
- Behringer Wing
- Digico SD series
- Avid S6L
- Other desks are possible, with prior approval from our sound engineer (contact below).

Prepared Waves processing would be great.

We bring our session/scene for the mixer, so it must be updated to latest firmware.

There must also be a place for a laptop at FOH, and prepared minijack with stereo DI.

Please prepare your desk with Wi-Fi and fully charged tablet with appropriate app for remote mixing.

Sound system must be calibrated and capable of playing loud and clear, up to 105dB SPL(A) at FOH with enough headroom, and with optimized coverage for your concert venue.

We would like to have separate sub and front fill output.

Preferred sound systems:

- d&b audiotechnik (R1 control at FOH would be great, if possible)
- Martin audio
- L'acoustics

For **monitoring** we bring our own **In-Ear monitoring** (IEM) system, a rack with 8 channel IEM transmitter, combiner and antenna. We don't need wedge monitors.

We bring **our wireless microphone rack** for three (3) brass instruments, and will be positioned near the stagebox. We need additional one tall mic stand for our antenna and one small for drummer's iPad.

Read and confirm this rider.

If you are unable to provide any of the mentioned requirements, please contact us at least four (4) weeks prior to the performance, so we can find a solution together.

All your equipment must be fully prepared at the time of our arrival, so we can have smooth sound check and a great show.

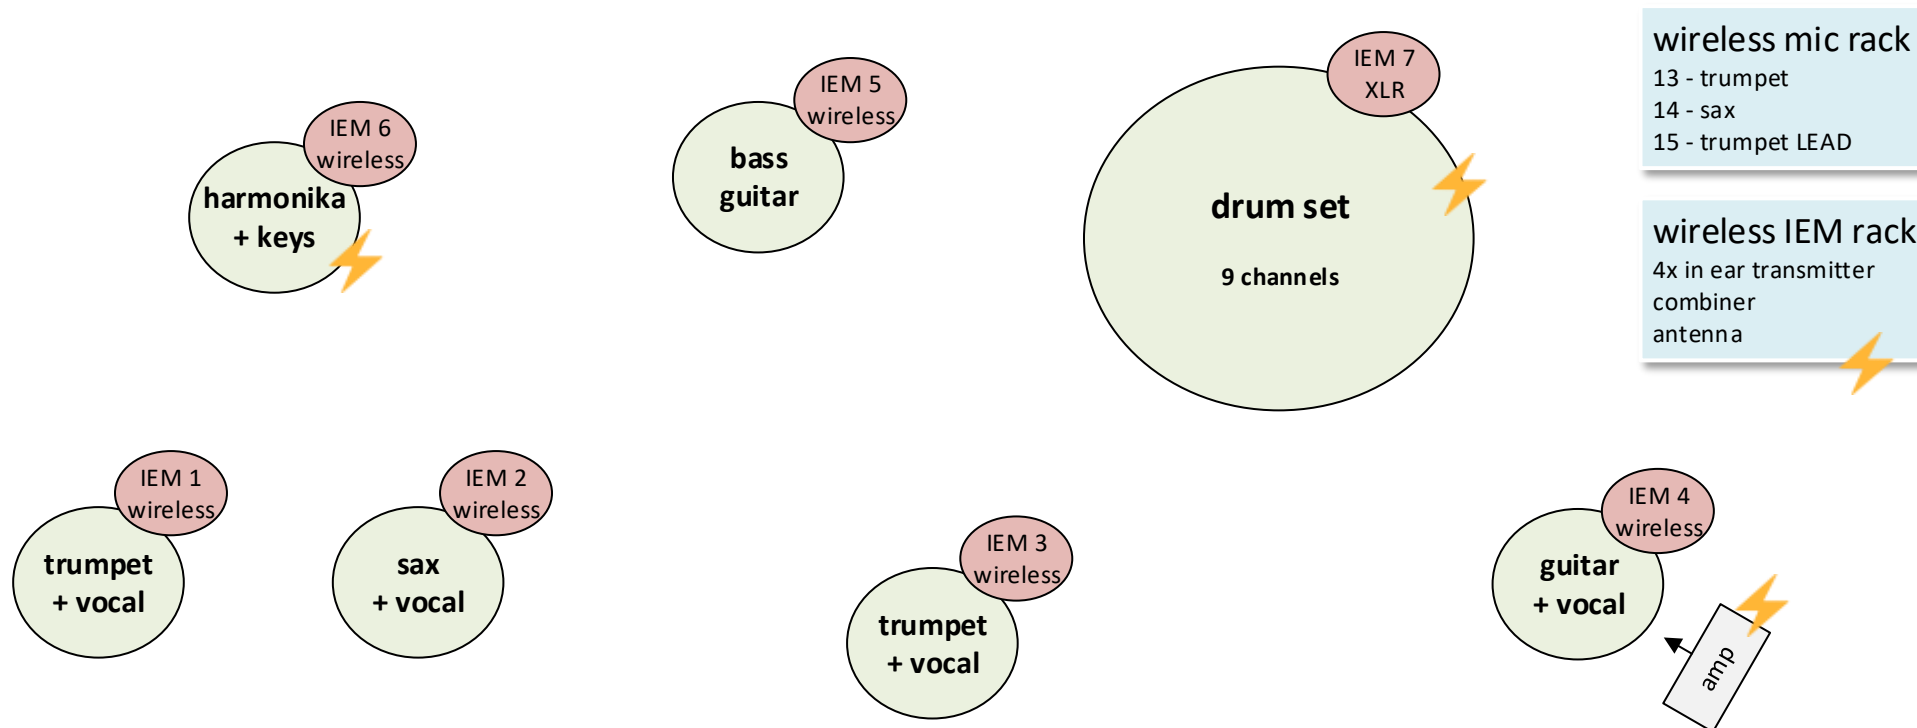

Any deviation from this rider must be approved by our sound engineer or manager:

Jure Matoz (sound engineer)
